HUMAN-COMPUTER INTERACTION

A Journal of Theoretical, Empirical, and Methodological Issues of User Science and of System Design

Contents of Volume 3

Number 1

- Introduction to This Special Issue on
Computer-Supported Cooperative Work.....1**
Bill Curtis and Thomas Malone

- A Language/Action Perspective on the Design
of Cooperative Work3**
Terry Winograd

- Relationships and Tasks in Scientific Research
Collaboration31**
Robert E. Kraut, Jolene Galegher, and Carmen Egido

- Cognitive Science and Organizational Design:
A Case Study of Computer Conferencing59**
Kevin Krowston, Thomas W. Malone, and Felix Lin

Number 2

- An Architecture for Intelligent Interfaces:
Outline of an Approach to Supporting
Operators of Complex Systems87**
*William B. Rouse, Norman D. Geddes, and
Renwick E. Curry*

- The Minimal Manual123**
*John M. Carroll, Penny L. Smith-Kerker, James R. Ford,
and Sandra A. Mazur-Rimetz*

- Procedures for Obtaining and Testing
User-Selected Terminologies155**
Charles P. Bloom

Number 3

Construction Kits and Design Environments: Steps Toward Human Problem-Domain Communication	179
<i>Gerhard Fischer and Andreas C. Lemke</i>	

A Keystroke Analysis of Learning and Transfer in Text Editing.....	223
<i>Mark K. Singley and John R. Anderson</i>	

Animation Using Temporal Constraints: An Overview of the Animus System.....	275
<i>Robert Adámy Duisberg</i>	

Number 4

Analysis of the Cognition Involved in Spreadsheet Software Interaction	309
<i>Judith Reitman Olson and Erik Nilsen</i>	

Debugging: An Analysis of Bug-Location Strategies	351
<i>Irvin R. Katz and John R. Anderson</i>

Teaching and Learning Computer Programming Multiple Research Perspectives

edited by

Richard E. Mayer

University of California, Santa Barbara

The influx of computer technology into classrooms raises the question -- how can we teach children to use computers productively and what effect will learning to program computers have on them? This collection by respected researchers of teaching and learning computer science summarizes and integrates major theoretical and empirical research. It gives a current and concise account of how instructional techniques affect student learning and how learning of programming affects students' cognitive skills.

Contents: R.E. Mayer, Introduction to Research on Teaching and Learning Computer Programming. D.H. Clements, S. Merriman, Componential Developments in LOGO Programming Environments. A.L. Fay, R.E. Mayer, Learning LOGO: A Cognitive Analysis. R. Lehrer, T. Guckenberger, L. Sancilio, Influences of LOGO on Children's Intellectual Development. J. Littlefield, V. Delclos, S. Lever, K.N. Clayton, J. Bransford, J.J. Franks, Learning LOGO: Method of Teaching, Transfer of General Skills, and Attitudes Toward Computers. E. Soloway, J. Spohrer, D. Littman, E UNUM PLURIBUS: Generating Alternative Designs. D.N. Perkins, S. Schwartz, R. Simmons, Instructional Strategies for the Problems of Novice Programmers. N.M. Webb, S. Lewis, The Social Context of Learning Computer Programming. K.D. Sloane, M.C. Linn, Instructional Conditions in Pascal Programming Classes. D. Sleeman, R.T. Putnam, J. Baxter, L. Kuspa, An Introductory Pascal Class: A Case Study of Students' Errors. S. McCoy Carver, Learning and Transfer of Debugging Skills: Applying Task Analysis to Curriculum Design and Assessment. R.H. Seidman, New Directions in Educational Computing Research.

THE LATEST IN ITS

Foundations of Intelligent Tutoring Systems

edited by
Martha C. Polson
J. Jeffrey Richardson
University of Colorado

advisory editor
Elliot Soloway
University of Michigan

"... covers nearly every aspect of intelligent tutoring systems (ITSs) ... the contributors do a fine job in presenting the subject matter. If you have a strong interest in ITSs, this book ... will serve your needs well."

-- AI SIG Newsletter

A well organized guide to the basic principles of ITS that is appropriate for professionals and students. Each chapter builds up the reader's knowledge of developing, implementing, or evaluating ITS.

Contributors: H.L. Burns, C.G. Capps, J.R. Anderson, K. VanLehn, H.M. Halff, R.R. Burton, J.R. Miller, W.B. Johnson, D. Littman, E. Soloway, J.J. Richardson, Appendix I: Selected Intelligent Tutoring Systems.

Intelligent Tutoring Systems Lessons Learned

edited by
Joseph Psotka
Army Research Institute
L. Dan Massey
BBN Laboratories
Sharon A. Mutter
Catholic University

advisory editor
John Seely Brown
*Advanced Research Center,
Xerox Palo Alto*

The power and potential of current ITS technology is described here by the designers and builders of major ITS projects. The book illustrates how, in less than a decade, the field of Intelligent Tutoring Systems has advanced from experimental systems in universities to systems that perform practical, real-world tasks.

Contributors: J. Psotka, L.D. Massey, S.A. Mutter, W.B. Johnson, B. Means, S.P. Gott, Y.J. Tenney, L.C. Kurland, D.E. Kieras, P.L. Pirolli, J.G. Greeno, D.M. Russell, T.P. Moran, D.S. Jordan, S.A. MacMillan, D. Emme, M. Berkowitz, D.C. Wilkins, W.J. Clancey, B.G. Buchanan, F. Ritter, W. Feurzeig, T. Govindnaraj, J.R. Frederiksen, B.Y. White, A. Collins, G. Eggan, L.D. Massey, J. de Bruin, B. Roberts, J.G. Bonar, R. Cunningham, W. Feurzeig, F. Ritter, D. Frye, D.C. Littman, E. Soloway, D.M. Towne, A. Munro.

THE NATURE OF EXPERTISE

Edited by

Micheline T.H. Chi, Robert Glaser, *University of Pittsburgh*
Marshall J. Farr, *Office of Naval Research and Farr-Sight Company*

During the past two decades, expertise has become an important subject for investigation due largely to developments in artificial intelligence and cognitive psychology. *The Nature of Expertise* displays the variety of domains and human activities to which the study of expertise has been applied. This text reflects growing attention on learning and how expertise is acquired by discussing the conditions that enhance and limit the development of high levels of cognitive skill.

This resource will inform researchers and graduate students in artificial intelligence, computer science, and cognitive science/cognitive psychology, of the important implications that the study of human expertise has for their work. Experimental psychologists and educational researchers will also benefit from these interdisciplinary studies.

Contents: M.T.H. Chi, In Memoriam · R. Glaser, M.T.H. Chi, Overview
M.I. Posner, Introduction: What is it to Be an Expert? · **Part I: Practical Skills**
· D.R. Gentner, Expertise in Typewriting · K.A. Ericsson, P.G. Polson,
Memory for Restaurant Orders · J. Staszewski, Skilled Memory and Expert
Calculation · **Part II: Programming Skills** · E. Soloway, B. Adelson, K.
Ehrlich, Knowledge and Processes in the Comprehension of Computer
Programs · J.R. Anderson, P. Pirolli, R. Farrell, Learning to Program
Recursive Functions · B. Adelson, E. Soloway, A Model of Software Design
Part III: Ill-Defined Problems · E.J. Johnson, Expertise and Decision Under
Uncertainty: Performance and Process · J.A. Lawrence, Expertise on the
Bench: Modeling Magistrates' Judicial Decision Making · J.F. Voss, T.A.
Post, On the Solving of Ill-Structured Problems · **Part IV: Medical Diagnosis**
· G.J. Groen, V.L. Patel, The Relationship Between Comprehension and
Reasoning in Medical Expertise · A. Lesgold, H. Robinson, P. Feltovich,
R. Glaser, D. Klopfer, Y. Wang, Expertise in Complex Skills: Diagnosing
X-Ray Pictures · W.J. Clancey, Acquiring, Representing, and Evaluating a
Competence Model of Diagnostic Strategy.

NEW!

STUDYING THE NOVICE PROGRAMMER

edited by
Elliot Soloway, James C. Spohrer
Yale University

Uniting a wide range of perspectives on the study of novice programmers, these papers not only inform readers of empirical finding, but provide insights into and ideas on the subject itself. The wide array of methodologies found in these studies make this an invaluable reference for those planning studies of their own.

Contributors

Part I: Early Work

S. Papert, C. Solomon

Part II: Transfer

J.A.M. Howe, P.M. Ross, K.R. Johnson, F. Plane, R. Inglis, M.C. Linn, J. Dalbey, D.M. Kurland, R.D. Pea, C. Clement, R. Mawby, R.E. Mayer, J.L. Dyck, W. Vilberg

Part III: Learning Programming Concepts

R.E. Mayer, R. Samurcay, J-M. Hoc, E. Soloway, J. Bonar, K. Ehrlich, C.M. Kessler, J.R. Anderson, D.N. Perkins, C. Hancock, R. Hobbs, F. Martin, R. Simmons

Part IV: Bugs

B. Du Boulay, R.T. Putnam, D. Sleeman, J.A. Baxter, L.K. Kuspa, D.M. Kurland, R.D. Pea, J. Bonar, E. Soloway, J.C. Spohrer, E. Pope

Part V: Designing Programming Environments

N. Cuniff, R.P. Taylor, J.B. Black, B. Du Boulay, T. O'Shea, J. Monk, TP. Ross, J. Howe, M. Eisenstadt, M. Brayshaw

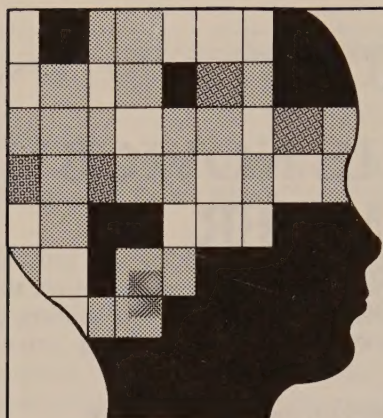

Part VI: Future Directions

Brain as Computer

The Cerebral Computer

An Introduction to the Computational Structure of the Human Brain

Robert J. Baron

University of Iowa

The human brain is a computer with memory capacity and computational power exceeding even the fastest and largest main frame systems. Blending current computer science and neuroscience research, this book gives a detailed account of brain organization, through its underlying storage and computational networks.

In his expert discussion, Baron describes brain storage, control, and coding functions, and outlines a framework for understanding the nature of its computational structure. The framework encompasses human vision, mental imagery, sensory-motor functions, audition, affect, and behavior. This breadth of coverage enables *The Cerebral Computer* to lay the groundwork for understanding the logic of the brain.
